

legacywms

# Our product is for companies that need to manage products

- Workers in a warehouse will use our management system in order to help keep track of where items are in order to get to where they need to be.
- The application allows for easy access to the inventory, make changes such as update, delete, read, and create.

# Road map

Designed the qt gui.

Designed the database by using MySql with aws.

Scrapped the qt design and switched to visual studio.

Connected the databases to the GUI.

# Goal

- Easily add new items to the database
- Know the location of the inventory
- Update and delete entries
- Ship out a product using the GUI
- Display a list of products shipped out

# Demo...

- Log in
- Main Menu
- Inbound
- Update
- Storage
- Outbound
- Outbound Report
